| Chairs | Christoffer Karoff (chair) Urs Treier (chair) | | | |
| Associated theme(s) | Earth Observations | | | |

About:

The aim of this working group is to support the use of Earth Observations (EO) at Aarhus University and foster collaboration among the various groups and researchers working with EO at Aarhus University.

Specifically, we are responsible for managing the research license we have with Planet. To utilize this license, you must be a member of this working group. Furthermore, the data you download must be stored on erda.au.dk and you are required to send the chairs a 3-5 line description of your project along with a GeoJSON polygon file (as downloaded from the Planet platform).

The working group will also host a series of thematic mini-workshops on different subjects within EO.
